

# NAMEPLATE DETAIL PRESSES

Model 4

## SYSTEM FEATURES

- Manually operated, portable bench-top design
- Marks clear, easy-to-read numbers and letters with one short lever stroke.
- Great for marking nameplates, metal tags, dog tags and pet ID tags.
- Easily stamps into aluminum, brass, stainless steel\* and some plastics
- Four (4) sharp face character size marking dials are available: 3/32", 1/8", 3/16" and 1/4".
- Marking dials are interchangeable on all Model 4 machines.
- Machines, additional marking dials, and replacement parts are available to purchase at: <https://secure.gtschmidt.com/sunshop/>

SCHMIDT manufactures the Model 4 nameplate marking machine. These manually operated machines are perfect for stamping into name plates, metal tags, dog tags and ID tags.

The Model 4 presses mark evenly spaced letters and numbers that are accurately aligned and uniformly deep.

Marking dials come in four different character sizes, 3/32", 1/8", 3/16" and 1/4". Each marking dial has 40 characters - A through Z (upper case), 0 through 9, slash (/), dash (-), period (.) and an ampersand (&).

All dials are interchangeable and fit any Model 4 machine.

Replacement and additional dials can be purchased separately.

The Model 4 can be used to mark on a variety of materials - brass, aluminum, stainless steel\*, steel and some plastic. These presses accept nameplates and tags up to 4" deep and 8" wide.

Model 4 machines, along with their marking dials and replacement parts, can be purchased directly from our website. <https://secure.gtschmidt.com/sunshop/>

SCHMIDT also sells a variety of blank and screened nameplates. Our in stock sizes are listed below. Additional sizes can also be purchased with lead times based on availability.

MACHINE SPECS

Table Dimensions: 9.75" W x 7.75" D  
 Tag Size Accepted: Up to 4" Deep, 8" Wide  
 Plate Thickness: .012" to .093" Thick  
 Marking Limits: As low as 3.25" from the top of the nameplate  
 Machine Weight: 29 lbs net, 33 lbs shipped

\*GTS does not recommend the use of character sizes larger than 1/8" on stainless steel - while the dial is quite capable of creating an impression in this material, the pressure required to mark larger characters may cause the ram to deflect resulting in incomplete characters.

MARKING DIALS
